Repair rabbit and guinea pig hutches to..... keep them warm & dry in winter.

Mushrooms and toadstoolsdifficult to know good from bad and some are highly toxic!

ORCHARD

VETERINARY CENTRE

Autumn 2023

news

Did you know that we have our own Cattery?

Situated at the heart of Harborne Golf Club, our cattery provides luxurious accommodation for your cat to enjoy a holiday at the same time that you do! Our purpose-built cattery, designed by our veterinary team, provides the very best in boarding facilities so you can relax and know your feline friend has every need catered for. Set in a peaceful country-like setting, surrounded by the beautiful parkland of **Harborne Golf Course**, **The Cats Whiskers** ensures resident animals have minimum disturbance to help them settle in quickly.

Benefits of using The Cats Whiskers

- Convenient location and peaceful setting (despite its proximity to the city centre!).
- Modern luxurious accommodation.
- Veterinary supervision - situated next to Orchard Vets which is handy should your pet need urgent treatment while you are away.
- Experienced staff
- Clients of Orchard Veterinary Centre qualify for discounts on all boarding fees.

Our accommodation is an architect-designed building which provides comfort and security for the animals who are our guests. Each chalet provides individual accommodation for your cat during his or her stay and is protected by all-round sneeze barriers.

Shelves are provided for cats that like to be high up in the world, with chairs and other homely objects, which may help those less mobile to reach high places!

Each cat, or family of cats, has its own temperature-controlled accommodation with separate bedding and exercise areas. We employ rigorous hygienic practices and supervision routines, aimed at maintaining the animal's health and comfort. Each pet is cared for individually and known personally by our experienced staff.

Litter trays, dishes, toys and bedding are provided, but you are

welcome to bring in your cat's own scratching post and other familiar items to make him feel more at home. We will try to match your cat's normal diet and, with our extensive range of foods, we can cater for even the fussiest of eaters.

You can book your pet into our cattery either by phoning us directly on 0121 428 1234 or by booking online.

All online bookings receive a discount of 10% with clients of Orchard Vets receiving further discounts!

Two Eyes.....

Our pets certainly do have a way of expressing their emotions with their eyes, showing us happiness at walk time or that 'please give me a biscuit look'!

Your pet's eyes are very sensitive complex organs and have three main layers - **Sclera, Uvea and Retina.**

A third eyelid protects and acts as a windshield wiper sweeping away debris.

The lacrimal (tear) gland produces natural tears to keep the cornea moist, cleanse the eye and help to remove dirt.

....Two Ears

The sound of the dog biscuit tin opening or the shake of the cat food box, and pets come running even if they are in the deepest of sleeps!

Some pets develop a condition called **dry-eye** that occurs when the tear glands are damaged by the immune system, resulting in very little or no tear production. Although a permanent condition, there are treatments available to help preserve vision and ease the dryness.

So look a little closer into your pet's eyes.

- Is your cat or dog blinking excessively, frequently rubbing their eyes or keeping them closed more?
- Do the eyes look red, dry, inflamed or have a discharge?

If you have concerns, please call for an appointment, where our vet can perform a quick and simple test to measure the tear production.

If dry-eye is diagnosed, we can discuss treatment to help your pet feel more comfortable.

Their hearing is four times greater than us humans, is very sensitive and can detect higher frequency sounds. A cat and dog has many more muscles in their ears too, enabling them to raise, lower and tilt to pinpoint the actual direction and location where the sound is coming from. A cat can even independently rotate their ears, but no matter how amazingly our pets' ears perform, they can be prone to ear disease, also known as Otitis.

Otitis is a condition we see in our canine and feline friends, and at times is very painful and irritating. It can happen with any breed, but more so in those with floppy ears, hairy ear canals, dogs that swim regularly or have skin allergies.

Otitis Externa is when the external ear canal becomes inflamed, which can cause - **itching, redness or an unpleasant odour.**

We need to look at your pet without delay, if you notice ...

- **excessive head shaking or scratching**
- **a nasty smell coming from the ears**
- **thick dark wax or discharge**

Otitis Media affects the middle part of the ear, which can be a little more difficult to treat, and at times may happen due to ongoing or untreated Otitis Externa.

.....and a Nose

olfaction *n.* the act or capacity of smelling; the sense of smell.

Your dog's nose is an amazing piece of equipment! A human's primary sense is sight, but for canines it is the sense of smell that helps your pet understand the world they live in.

As a dog's nose hits the air, it can detect, taste and even remember minute odours, giving past and current neighbourhood news! A dog has the ability to breathe and smell at the same time. A fold of tissue inside the nose, helps split the airflow as it enters the nostrils, so that all the wonderful odours are diverted down one path for identification in the brain.

Nose Facts

Odour particles stick and accumulate inside the nose making the scent intense.

The area of a dog's brain that identifies all the smells, is about 40 times larger than a human's.

Scent (olfactory) receptors range from 125-300 million depending on the breed, compared to humans who have only 5-6 million.

Nostrils move independently, so informing the dog which direction the news is coming from!

A puppy has heat sensors in their nose, so Mum can be found in those early days of life when eyes and ears are closed.

Noses are generally cool and moist, which is caused by the mucus lining; a warm dry nose does not necessarily indicate illness, but any concerns contact your vet.

With this remarkable sense, dogs are now being trained to detect illness in humans, such as cancer and diabetes.

Call us for more information on ear care.

Nose Problems Sneezing is natural, however if it becomes too regular or excessive, it is a good idea for us to check your pet.

They may be suffering from

an allergy to food, pollen, dust etc.
an infection due to a dental or fungal problem.
a possible tumour/polyp.

a foreign body e.g. a grass seed. We have even heard of paper clips, dead insects, tinsel, string and a 12cm stick removed from noses!

Any signs of a crusty nose, discharge or blood, then contact us immediately for advice.

If you would like further information, do not hesitate to ask..... oh and if you thought you had a good hiding place for your dog's treats..... guess what?

Your pet already knows where they are!
